PROFILE

Seventeen years in enterprise IT and infrastructure, the last eight in information security, in Brazil and New Zealand. Today I work in security operations: I connect security platforms through their APIs, automate what should not be manual, and use AI to build the tooling operations need, quickly. Between 2025 and 2026 I delivered the systems and automations listed below, working across the full cycle: domain modelling, architecture, implementation, third-party integration, deployment and operation. Development was AI-assisted at every stage, and each architectural decision was recorded in a document versioned alongside the code.

3 Systems in production

2 Sectors

~70 Automation flows delivered

2,404 Commits across listed systems

144 Architecture decisions on record

311 Test files

EXPERIENCE

2026 – present	Cyber Security Specialist Hidrovias do Brasil Security operations: vulnerability management, identity and access with Entra ID and single sign-on, incident response, and support for audits and compliance. I connect security platforms through their APIs, automate repetitive security work, and use AI-assisted development to build the tooling operations need, quickly.
2025 – 2026	AI and Automation Specialist Nishimura Tech Solutions Delivery of the systems and automations listed below: analysis, architecture, implementation, deployment and operation.
2025	AI and Innovation Head TopSend Comunicação Integrada Delivery of AI agents for the agency clients and for its own internal operation.
2025	AI and Automation Specialist YachtMind API lookup and data presentation flows for an AI agent, serving a client in the yachting sector.
2023 – 2025	Security Operations and Reporting Analyst Caldic Placed through Amaris Consulting. Scripts extracting security data from Entra ID and API Defender, identity and access management, policies, audits and ISO 27001.
2022 – 2023	Senior Security Analyst ICBC Bank Incident response, Active Directory restructuring and strengthening of security protocols.
2020 – 2022	Senior Security Analyst Banco Pine Security baselines and regulatory compliance controls in a financial environment.
2018 – 2019	ICT Project Manager Wizbang Technologies New Zealand. Infrastructure project management, including the first security responsibilities.
2009 – 2016	ICT infrastructure and support New Zealand and Brazil Dimension Data in New Zealand; Gávea Investments, BTG Pactual, Scopus, Wittel and the British Consulate General in Brazil.

SYSTEMS DELIVERED

2025 - 2026, sanitized: no code, no credentials, no client data. Clients by sector.

- SYS-01 CW Editor** Land development real estate
An operations platform built on top of a third-party support system: it turns loose conversations into a managed Kanban funnel, with analytics, auditing and team onboarding.
1,961 commits · 138 recorded decisions · 311 test files
Next.js · React · Python · PostgreSQL · Redis · Playwright · Docker
- SYS-02 IAPAI** Legal
An AI legal-analysis product sold by subscription. Three layers talking to each other: the web application, the automation orchestrating support, and the engine doing the analysis itself.
3 integrated layers · 8 parallel analyses · 13 automation flows
Next.js · TypeScript · Supabase · Bun · Hono · tRPC · Prisma · n8n

SYS-03 GeoSampa Land development real estate

Territorial intelligence: it crosses official geographic datasets with regions the user draws by hand, and returns a qualified list, with export.

6 network components · 139 commits · 3 interfaces: CLI, API and worker

React · TypeScript · Node.js · SQLite · Leaflet · Playwright

AUTOMATION

AUT-01 Lead capture and batch outreach Land development real estate

A form captures the lead and places it in a queue. A scheduled job decides who is eligible for contact. A third flow sends in batches, waiting between messages so the number does not get burned.

3 flows · ~56 nodes

AUT-02 AI case triage Law firm

A case arrives by webhook, is classified and has its data extracted by AI, then moves on to the CRM: it creates the contact, moves the deal along the funnel, runs a registry check and returns a drafted email.

9 flows · ~108 nodes

AUT-03 AI product automation Legal

This is the whole product's support layer: a conversational agent with legislative lookup tools, analysis of incoming documents, entry through the official messaging API, AI cost telemetry and scheduled cleanup.

13 flows · ~350 nodes

EDUCATION

2015 - 2016	Post Degree, Graduate Diploma in Information and Communication Technologies Manukau Institute of Technology New Zealand.
2008 - 2011	Computer Networks Technologies, Computer Systems Networking and Telecommunications Instituto Universitário SENAC Brazil. Completed.

SKILLS

Information security	ISO 27001 · NIST CSF · Entra ID · Active Directory · Identity and access management · Incident response · Policy, audit and compliance
Development	Next.js · React · TypeScript · Node.js · Python · Bun · Hono · tRPC · Prisma
Data and infrastructure	PostgreSQL · Supabase · SQLite · Redis · Docker · Alembic · Leaflet · REST APIs and third-party integration
Automation and AI	n8n · AI agents · AI-assisted development · AI cost telemetry
Method	Architecture decision records · Versioned domain glossary · Browser verification · Playwright · Git
Languages	Portuguese (native) · English (native) · Spanish (basic)

Portfolio with the technical detail of each system: lucasvnd.github.io
